SUMMARY

A Front-end Developer with 5+ years of experience in developing and managing responsive web application using Angular to deliver exceptional customer experiences.

SKILLS SUMMARY

- | | |
|-------------------------------|---|
| • Languages | HTML, CSS, SCSS, JavaScript, SQL |
| • Frameworks/Libraries | Angular, Bootstrap |
| • Versioning Tools | GitLab, GitHub, Insomnia, Postman, Swagger ,Bitbucket |
| • Methodology | Version one (Agile),Jira |

WORK EXPERIENCE

Mphasis Limited

Nov 2020 - present

Software Engineer

Project 1: Federal Express Corporation (FedEx) - CLAIMS, Mphasis

1. The overall objective is to enhance customer experience across FedEx.com, eClaims and ECD-client. These platforms provide easy filing and processing of claims for freight, ground and express FedEx operations.

As a part of claims modernization, decoupling the legacy application into microservices, which enables to prevent faults/errors during processing, ensuring easier error resolution, enhanced processing speed, and addressing network instability with circuit breakers.

- Experience in using version control like Git for code changes.
 - Performed debugging and troubleshooting of existing software programs.
 - Tested the APIs using postman, Swagger and Insomnia.
 - Deployed code in specific environments using Jenkins and followed the CI/CD process.
 - Resolved customer issues by establishing workarounds and solutions to debug and create defect fixes.
 - Assessed code during testing stage to determine potential glitches and bugs.
2. providing Track & Ship Online in e-commerce that allows Shipment agents to do shipping through Air, Ground and Water with discounts for customers, based on the business objectives.
 - Implemented features and capabilities to meet customer requirements and business goals.
 - Resolved bugs in the existing applications and implemented enhancements that greatly optimized application functionality.
 - Collaborated closely with the SCRUM team to support projects during all phases of development.
 - **Angular** based stable and maintainable codebase.
 - **CSS** for styles and layout.

- Created Jenkins pipeline and doing project deployment with specific branch for specific ENV.
- 3. Developed and maintained User interface of a web-based Operational Visibility application for monitoring business transactions and events to track various situations relating to inefficiencies and threats at real-time (Employee).
 - Collaborated with database teams, backend developers, and UX designers to accomplish the client's expectations, goals and intended functionalities.
 - Recommended concepts for new code development and developed Operational Visibility dashboard from scratch.
 - Worked with the AGILE methodology, contributed to PI planning programs, and planned iteration objectives to provide clients with end-to-end solutions.
 - Monitored and improved front-end performance and documented application issues and worked on defect fixes.
 - Led a small UI team of 2-3 members and communicated effectively to prioritize tasks for iteration.
 - User Interface development using **Angular framework** with **JavaScript** and integrating Restful API.
 - Customized CSS for the layout and styles, with **bootstrap grid, flex layout** for consistent framework.
 - Used Open-Source Libraries like **Angular-material, Apex-charts** for the graphical and tabular representation of Hourly performance of High-level Employees.
- 4. Worked on short-term project by creating Network and Sequence diagrams by understanding business transactions and worked on SonarQube Analysis.

Project 2: Riverbed DX (Data Express) acts as a resource server for data operations

- Relies on Common Services for authentication and authorization
- Implements centralized security across the platform
- Ensures multi-tenant isolation to protect tenant-specific data
- Handles business-level authorization enforcement
- Does not manage user credentials or roles directly
- Extracts and validates security tokens from incoming requests
- Enforces authorization checks before allowing data access
- Maintains a secure and controlled environment for data operations

Project 3: M&T(Banking domain)

- Building and enhancing RESTful APIs and backend services that support core banking workflows such as account management, transactions, lending, and payments.
- Developing responsive front-end interfaces using Angular, which integrates with back-end systems.
- Implementing and supporting features across various banking modules, including Retail Banking, Corporate & Commercial Banking, Islamic Banking, and Payments & Transfers.
- Writing complex SQL queries, stored procedures, and PL/SQL scripts in Oracle DB.
- Following Git branching strategies and participating in code reviews, CI/CD pipelines, and release activities.
- Mentoring junior developers and contributing to technical design and architecture discussions

EDUCATION

Government Engineering College, K R Pet, Mandya, Karnataka.

Bachelor of Engineering with an aggregate of 60.5%.

2014-2018

CERTIFICATIONS

- SAFe for Teams *Scaled Agile*
- Angular: The complete Course *Udemy*

ACHIEVEMENTS

- *Certificate of Recognition*
 - For the contribution of features in the project work as Junior UI developer.
 - For demonstrating quick learning abilities to promptly complete UI-related tasks for Claims Modernization project.
